

Score card

Every correct answer is worth a carbon reduction of 500 kg.

Correct answers to bonus questions are worth a further reduction of 250 kg.

We can calculate the carbon footprint in kg/year of the following energy sources by multiplying the consumption by the numbers shown.	Multiplier
Heating oil in litres per year	2.975
Gas in Kw hours per year	0.19
Electricity in Kw hours per year	0.43
